- [2DVD](#)

Flight Date:

Saturday, April 23, 2011

Status:

Green

All five NASA 2dvds measured some light rainfall between 09-1200 UTC on April 23rd. Some of the largest drops measured were 4-5 mm in diameter.

Today we were able to get the 2dvds to automatically begin sending ASCII formatted data to the drop server each hour. However, there were problems uploading the data to the GSFC image server. I think this may be either a permissions issue on the remote ftp server or a scripting problem. We will check into this problem tomorrow.
